

Binkabi – Commodities 3.0

1

Binkabi is a platform for issuing and trading commodities on the blockchain.

Our vision is to empower fairer and more profitable commodity network through collaborative efforts of our members, leveraging blockchain technology.

Problems

2

Binkabi is solving issues in commodity supply chain due to the lack of trust:

- **Frictions:** over reliance on USD, middlemen and paper-based processes
- **Funding:** high cost and low access to funding in emerging markets
- **Fairness:** Commodity producers (farmers) bear most of the risks whilst being paid very little.

Solutions

3

Barter Block™ – The world’s first smart bartering on the blockchain – **Early Adopters Programme**

Barter Block enables direct, secure, low-cost cross-border physical commodity trading with reduced reliance in USD.

BinkabiDEX– Tokenization and trading of commodity warehouse receipts powered by *Binkabi commodity tokenization protocol* – **pilots in Nigeria**

Binkabi Token (BKBi)

4

BKBi is membership and *discount token* that aligns interests, governs performance and creates network effects by rewarding active participation.

Commodities are what feed us, build our cities, run our transport systems – the basic stuff of life.

Get REAL exposures to some of the world’s most traded resources whilst making life better to millions of commodity producers and farmers in emerging markets.
